AI Language Services: from Korean-accented English speakers to developing **200 Vietnamese commands.**

THE CHALLENGE:

NATIVE SPEAKERS AND REGIONAL ACCENTS.

A Silicon Valley–based software company with a focus on Artificial Intelligence through Deep Learning needed our help to develop hundreds of voice commands for their products.

From mid 2016 we've been working closely with this venture-backed company, providing them with voice talents from more than 100 translators, and over 10 different languages.

> " A lot of companies will be able to provide voice over services for certain languages and stipulated phrases, but for this project, Day Translations had to develop natural sounding phrases with the help of native speakers that truly understand their culture, and their way of communicating. "

The Languages we worked on so far in this Project:

Canadian French
Korean
Korean-English
UK English
American Spanish
Vietnamese
Cantonese
German
Russian
Brazilian Portuguese
Taiwanese Mandarin
Australian English

THE SOLUTION:

A LANGUAGE SERVICE PROVIDER READY TO SATISFY ANY DEMAND, AND GUARANTEEING NATIVE SPEAKERS IN EVERY RECORDING.

For our client's AI product to be 100% localized, household phrases with no more than five words needed to be developed, taking into account the lifestyles of people from all over the world.

For one of the projects, ***the client wanted to capture Korean-accented English speech for the AI commands.*** *Our speakers needed to have Java for their recordings, and a 100% quiet space.*
